**INTRO**

Thank you for agreeing to take this survey about medical research. Your responses will be used to help better understand what different people think about research.

The survey should take about 25 minutes to complete. Your responses are completely anonymous. That means that we don’t ask your name and have no identifying information about you. Also, everyone’s answers are grouped together with the answers of everyone else who takes the survey. That way, we can’t tell what any individual person has answered. No names will be collected.

Thank you very much for helping us with this project.
